

Locate: promoting safety through tree management

There are times when ignorance *is* bliss but only by knowing where your trees and assets are can you begin to manage them effectively.

Manage your tree details with **Eye-TREE** and the **Leica Geosystems' CS25 GNSS** ruggedised tablet PC. Built for the most demanding field environments but nevertheless light-weight and compact.

Record the tree details you require:

- **Species** choose from the extensive pick list
- **Position** choose the accuracy you require from 1-3m to cm*
- **Size**
- **Age**
- **Condition**
- **Photographs**

** Sub 10cm accuracy requires an external antenna and post processing at extra cost*

Share the recorded data with CAD, GIS, spreadsheets and databases. Or use **Eye-TREE** to intuitively manage your tree stock and duty of care.

Short-term hire from 1 week available - Contact us for details.

Tel: 01462 816648 Email: mark.spence@aitspatial.co.uk

Leica Geosystems' CS25 GNSS

- 17.8 cm/7 inch sunlight readable touchscreen
- 64 GB SSD hard drive, eliminating internal moving parts
- Integrated GPS, 3G modem, WiFi and Bluetooth®
- Ultra-rugged design
- Integrated Long Range Bluetooth® with up to 350 m (1150 ft) range to connect to (only available in the CS25 LRBT)

Eye-TREE is part of the Eye-RANGE of mapping-based management solutions from AIT Spatial Ltd: **Eye-TREE**, **Eye-TREE Lite** (as used at Westonbirt Interactive Map), **Eye-WALKS**, **Eye-ASSET** and **Eye-SPACE (BIM)**.
